est. Elo (moves): from average cp loss through the calibration curve (the grading depth must match the calibration's). **perf. Elo:** maximum likelihood over eligible games (standard start, no overrides, cuts, player or setup changes). Ranges are 95% intervals. All ratings are on our Stockfish ladder's scale, not FIDE or lichess.

Does confidence predict move quality?

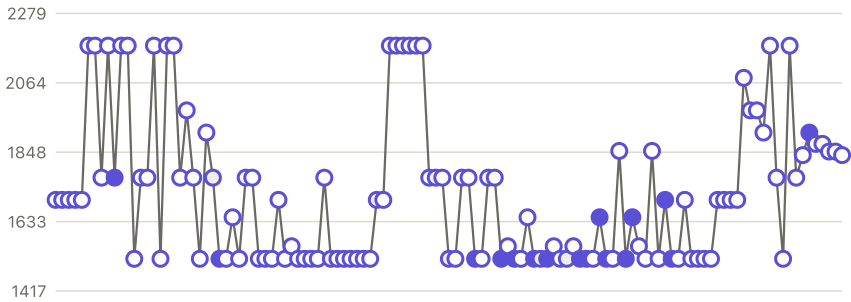

average cp loss by Jev's confidence (Choice setups)
